

How it Works: Convolutional Neural Networks

Slide: http://brohrer.github.io/how_convolutional_neural_networks_work.html

faces

cars

Convolutional Deep Belief Networks for Scalable Unsupervised Learning of Hierarchical Representations
Honglak Lee, Roger Grosse, Rajesh Ranganath, Andrew Y. Ng

A toy ConvNet: X's and O's

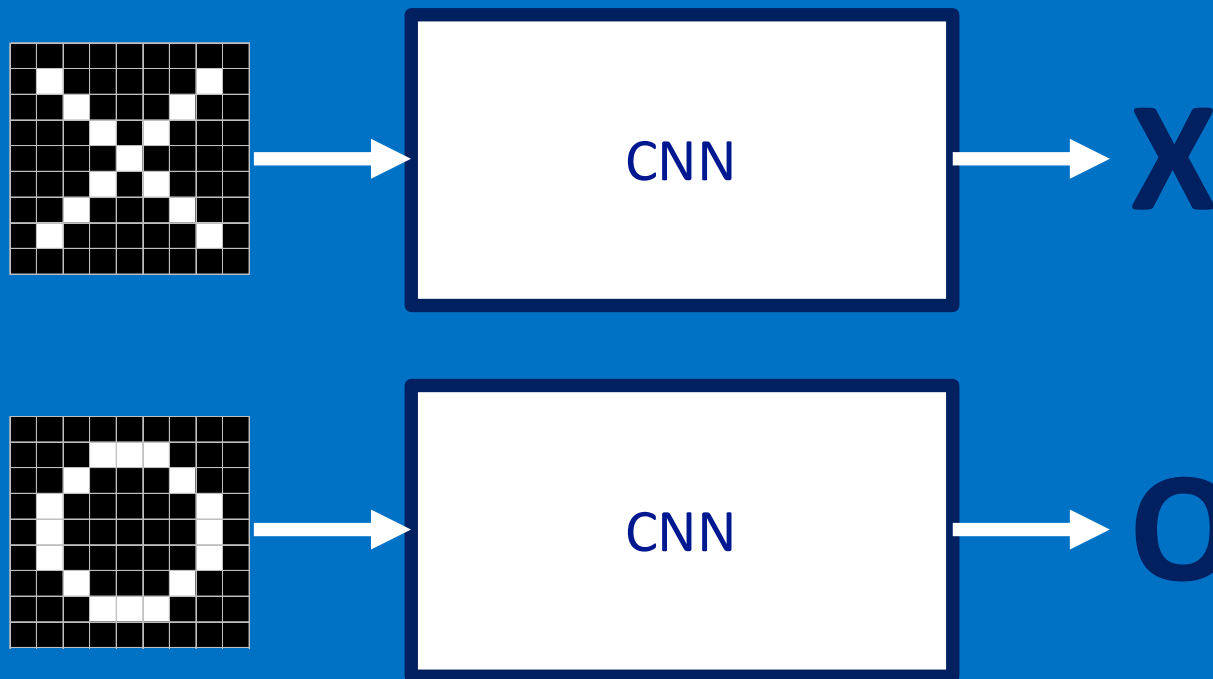

Says whether a picture is of an X or an O

A two-dimensional
array of pixels

X or **O**

For example

Trickier cases

translation

scaling

rotation

weight

Deciding is hard

ConvNets match pieces of the image

Features match pieces of the image

Filtering: The math behind the match

1. Line up the feature and the image patch.
2. Multiply each image pixel by the corresponding feature pixel.
3. Add them up.
4. Divide by the total number of pixels in the feature.

Pooling: Shrinking the image stack

1. Pick a window size (usually 2 or 3).
2. Pick a stride (usually 2).
3. Walk your window across your filtered images.
4. From each window, take the maximum value.

Backprop

	Right answer	Actual answer	Error
X	1	0.92	0.08
O			

Backprop

	Right answer	Actual answer	Error
X	1	0.92	0.08
O	0	0.51	0.49

Backprop

	Right answer	Actual answer	Error
X	1	0.92	0.08
O	0	0.51	0.49
		Total	0.57

Gradient descent

For each feature pixel and voting weight, adjust it up and down a bit and see how the error changes.

Gradient descent

For each feature pixel and voting weight, adjust it up and down a bit and see how the error changes.

Hyperparameters (knobs)

Convolution

- Number of features

- Size of features

Pooling

- Window size

- Window stride

Fully Connected

- Number of neurons

Architecture

How many of each type of layer?

In what order?

Not just images

Any 2D (or 3D) data.

Things closer together are more closely related than things far away.

dictionary

Limitations

ConvNets only capture local “spatial” patterns in data.
If the data can't be made to look like an image, ConvNets are less useful.

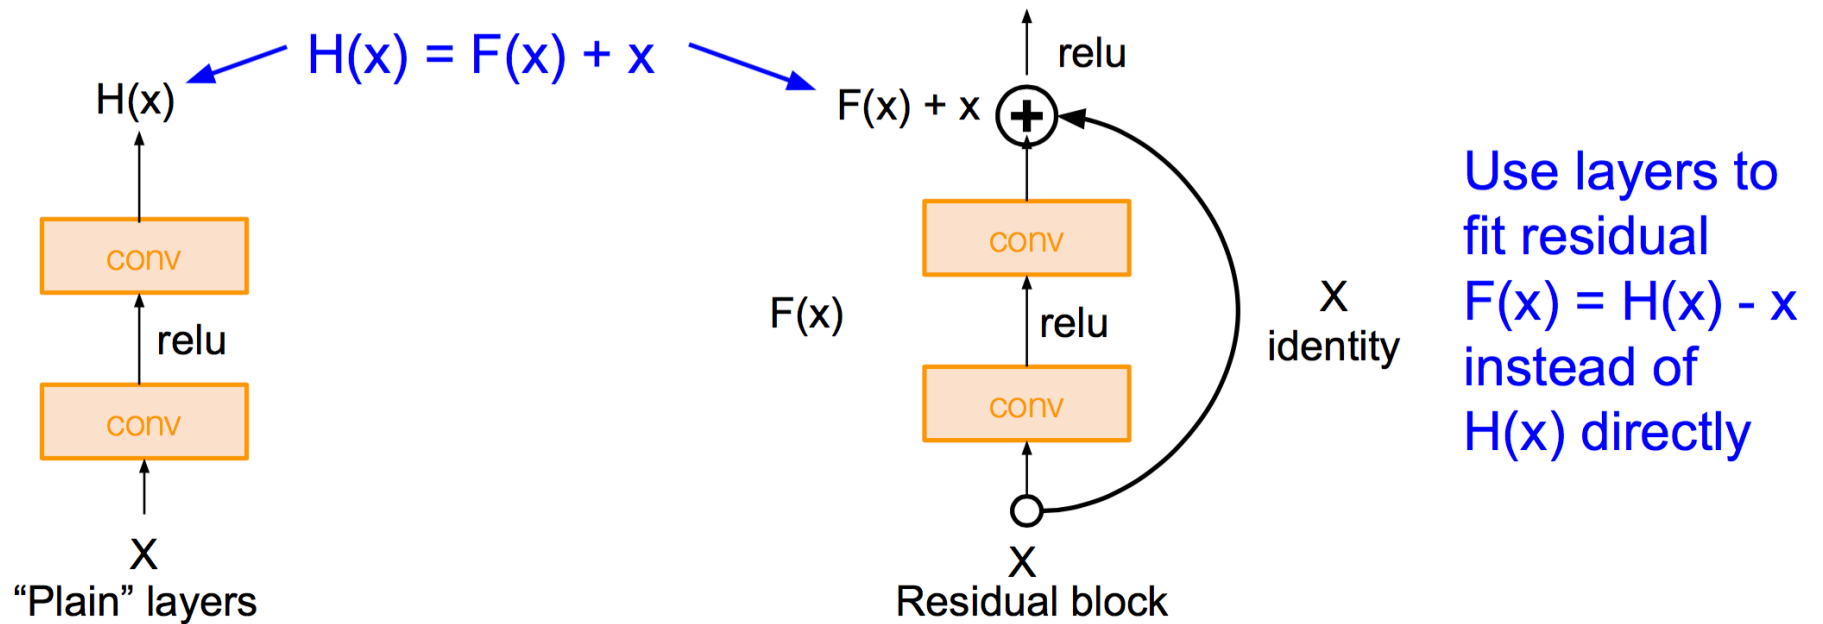

Compare this to SIFT

Case Study: ResNet

[He et al., 2015]

Solution: Use network layers to fit a residual mapping instead of directly trying to fit a desired underlying mapping

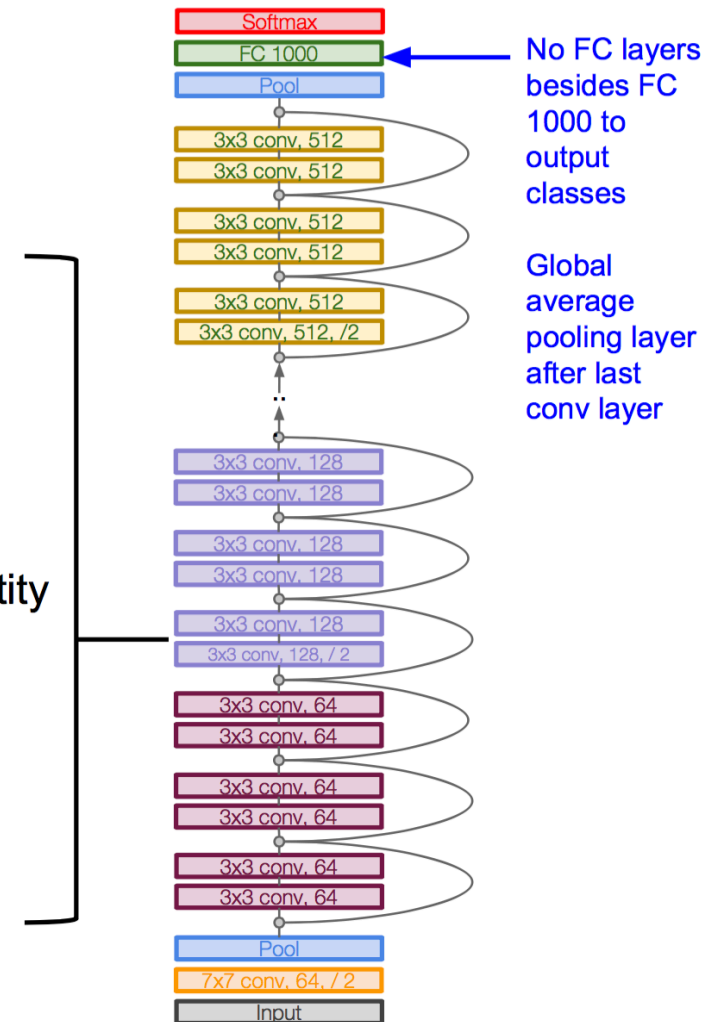

Case Study: ResNet

[He et al., 2015]

Full ResNet architecture:

- Stack residual blocks
- Every residual block has two 3x3 conv layers
- Periodically, double # of filters and downsample spatially using stride 2 (/2 in each dimension)
- Additional conv layer at the beginning
- No FC layers at the end (only FC 1000 to output classes)
